Open-fronted stackable storage bins – innovation made by Allit

The stackable storage bins of the ProfiPlus Compact range are equipped with hinged stacking lugs – an innovative feature allowing them to be nested inside each other (bin sizes 1 to 5), thus saving valuable space during transport and storage. Size 6 bins are also nestable inside each other. Stacking clips allow the boxes to be piled up. The bins come in four different standard colours and seven sizes. A smart array of add-on accessories such as slide-in (fixed) or hinged (flip-down) front windows, dust protection covers, dividers and slip-in labels boost the practical value of the bins both in work environments and at home.

Tip!

For order quantities of 1,000 pcs or more, ProfiPlus Compact bins are also available in the colour of your choice.

Stackable I
After the stacking lugs are locked into place, the bins can be stacked

Compatible
Stackable with ProfiPlus Box and ProfiPlus GripBox

Versatile I
Suitable for wall mounting and rack systems (see page 49)

Stackable II
Nestability helps to save space on the shelf, in the warehouse and in transit

Versatile II
Compatible with all common vehicle interiors

Practical
Stacking clips for ProfiPlus Compact 6 also provide easy stackability

Space-saving!

The patented stacking lug system of the ProfiPlus Compact makes a great space saver in the warehouse, on the shop floor and during transport. The bins are ready for stacking when the stacking lugs are pushed towards the inside of the bin. The stacking lugs can be just as easily pushed back to their original position – this smart mechanism makes the ProfiPlus Compact (sizes 1 to 5) nestable again and ensures storage space savings of up to 40% when the boxes are not in use.

1 At delivery
Stacking lugs are in flipped-in position (flush) – the bins are nestable inside each other

2 Flip out
For bin stacking, unlock the stacking lugs from the wall of the bin

3 Click in Push the stacking lugs towards the inside of the bin until they lock in place

4 Use & stack
When all stacking lugs are locked in place, the bins can be stacked upon each other

5 Re-nest
In order to make the bins nestable again, press the stacking lug back into the side wall

Certified quality!

ProfiPlus Box has been awarded with TÜV certification

The TÜV organisation (a renowned independent safety testing laboratory headquartered in Germany) has validated the manufacturer's specifications relating to open-fronted stackable storage bins ProfiPlus Box for compliance with the provisions of the German Product Safety Act (ProdSG)¹⁾. As a result, all storage bin sizes of the ProfiPlus Box range have achieved TÜV certification. The following parameters were taken into account in the validation process (1-5):

7

www.tuv.com
ID 2811207400

TÜV/GS

1. Secured suspension / Safety

Small-sized, forward-protruding lugs stamped into the wall mounting rail interlock with the bins, thus producing a clamping effect which reliably protects the bins against inadvertent detachment.

2. Mechanical strength

Loaded with 1.5 times the nominal load indicated by the manufacturer, the boxes did not exhibit any major deformation, neither while individually standing or suspended, nor while stacked. The boxes also withstood a drop test involving multiple drops onto a concrete floor – without exhibiting any breakage or permanent deformation.

4. Stacking stability

A stack of boxes, piled up to the maximum allowable height and loaded with the nominal load, will remain stable even if placed on a plane inclined by 5° in longitudinal or lateral direction.

5. Impact resistance

In the spring hammer impact test, neither the base nor the rim of the boxes exhibited any breakage or permanent deformation.

3. Material changes

When subjected to room temperatures of -10 °C and +60 °C, the boxes, loaded with 1.5 times the nominal load indicated by the manufacturer, did not exhibit any major deformation – neither while standing or suspended individually, nor while stacked.

1) German "Equipment and Product Safety Act" ("ProdSG") of 1st December 2011

ProfiPlus Box or Compact

When to use ProfiPlus Box or ProfiPlus Compact?

The decision of whether to choose ProfiPlus Box or ProfiPlus Compact storage bins will depend on a variety of aspects.

Mechanical exposure and load capacity

›ProfiPlus Box‹ storage bins are particularly solid, sturdy and dimensionally stable because they consist of more material. This type of bin is especially suited for heavy loads. ProfiPlus Box is TÜV-certified.

Thinner walls and is thus designed for lighter loads.

Fields of use

When many bins need to be stacked, e.g. in your own warehouse, use of this type of bin may sometimes be more economical because handling the hinged stacking lugs (as with ›ProfiPlus Compact‹) is not necessary.

Due to the integrated stacking lugs, the bins can be nested until needed. This saves considerable space during transport and storage as well as on the sales shelf and thus also reduces cost.

Available equipment features

Slip-in labels, dividers, and carrying rod (from size 4).

Slip-in labels, dividers, fixed and hinged shields, as well as protective dust covers.

Accessories/application

Wall mounting with rail, infinitely expandable wall panel system as well as mobile, free-standing (stationary) and wall racks.

Rail for wall mounting, infinitely expandable wall panel system as well as mobile, free-standing (stationary) and wall racks.

ProfiPlus Box and Compact are stacking compatible with each other and with many other boxes
